DETAILED ACTION

Applicant's RCE and IDS filed 3/13/07 has been received in application serial number 10/712,553. All comments have been taken into consideration.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 5-7, 17-19, 28 is rejected under 35 U.S.C. 102(e) as being anticipated by Mathis et al. 2003/0212453. Mathis et al. discloses the invention as currently claimed noting figures 2-12 comprising: A tether (56); a deformable aptation device (52) coupled about the axis of the tether; and a fastening member (36) coupled to the tether including a projection (48) capable of anchoring the fastening member to a wall of a ventricle of a heart; wherein the device is capable for percutaneous delivery and wherein the tether extends through the aptation device and the distal end of the tether

Application/Control Number: 10/712,553

Art Unit: 3738

Page 3

extends beyond a distal end of the aptation device. The "suitable for extending through a ventricle of a heart from at a proximal end, an atrioventricular valve annulus to at a distal end one of a wall of a ventricle and a papillary muscle within the ventricle " and "at a position corresponding to a location to contact cusps of an atrioventricular valve during systole, the aptation device comprising a body having a cross-sectional dimension greater than a cross-sectional dimension of the tether"......carries no patentabale weight in the absence of any distinguishing structure. Mathis clearly discloses the structure as claimed and is found to be inherently capable of performing the function. Further Mathis states in section [0050] that the device/anchor may be utilized in body lumens other than the coronary sinus and with therapeutic devices other than the mitral valve annulus therapy device.

Allowable Subject Matter

Claims 3-4, 8-13 and 30 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Suzette J-J Gherbi whose work schedule is Maxi-Flex off every other Friday and whose telephone number is 571-272-4751.

Application/Control Number: 10/712,553
